

# Warm - Up

Pg 207 1-7

# PENNYLICIOUS

I'll go home to shop for Ian's gift online with my credit card

Fill her up, please! Super Unleaded.

Boy my credit card is getting a real work out today!

# 5-3 Credit Management

## Keeping Credit Costs Down

# Objectives

- Wise use of credit
- Save by understanding loan terms

# Guidelines for using credit wisely

- 1. Limit installment debt to 15-20% of take-home pay.
  - Less than 1/3 of your **discretionary income**
    - **Income you have left after paying for basic needs such as food, shelter, and clothing.**

# Guidelines for using credit wisely

- 2. Purchase durable products that will outlast the payment period.

- Household appliances

- Cars (beware of lemons)

- Ex: You do not want to make payments on a car for three years if the car only lasts for one year.

# If you are thinking about borrowing money:

- First, determine the cost of borrowing money or opening a charge account.
- Can you afford it?

"You don't qualify for a loan or a credit card. We can however, offer you a free bank calendar."

# Ways to Reduce the Cost of Installment Loans

- 1. Select a short payment period
- 2. Compare interest rates
- 3. Make a large down payment

# Ask Yourself

- What are two guidelines for using credit wisely?
  - Limit to 15-20% of take-home pay; use credit only for durable goods

- What should you consider first if you are thinking about borrowing money?
  - Determine cost and decide if it is affordable

- What are three ways to reduce the cost of installment loans?
  - Select a short payment period; compare interest rates; make a large down payment

# Skill 1

- Compare a loan for a 1992 Oldsmobile Achieva for \$1200 at 6% vs 8% over 3 yrs.

Monthly Payment at 6%	Total Payment at 6%	Monthly Payment at 8%	Total Payment at 8%	Total Savings

Monthly Payment at 6%	Total Payment at 6%	Monthly Payment at 8%	Total Payment at 8%	Total Savings
\$36.50	\$1314.23	\$37.60	\$1353.73	\$39.50

- Remember to use the ANS Key on your calculator to find total payments. Use exact amounts to find total savings.

### Total Payment on 6% and 8% Loans

- Total payments and total costs are lower when the interest rate is lower

# Skill 2 Loans with Down Payments

$$\bullet D = rC$$

○ Where:

D = down payment

r = percent for down payment

C = cost

## Skill 2

- What is the down payment on a car for \$25,000 if they want to put 10% down?

- $D = r C$   
 $= .10(25000)$   
 $= 2,500$

The total down payment is \$2,500.

Loan Amount

●  $P = C - D$

○ Where

$P$  = loan amount

$C$  = cost

$D$  = down payment

- What is the loan amount after they make a of 10% down payment?

- $$\begin{aligned} P &= C - D \\ &= 25000 - 2500 \\ &= 22,500 \end{aligned}$$

The total loan amount is \$22,500.

# Total Amount

- $T = n * M + D$

- Where  $T =$  total amount

$n =$  number of payments

$M =$  monthly payment

$D =$  down payment

- **Find the total amount paid for the \$25,000 car. The loan is for 5 yrs at 12% interest.**

- First we must find the monthly payment.

$$M = \$500.50$$

$$nM = \$30,030.00$$

$$T = nM + D$$

$$= 2500 + 30,030 = 32,530.00$$

The total amount paid is \$ 30,530.00.

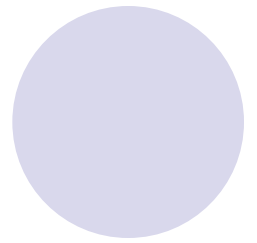

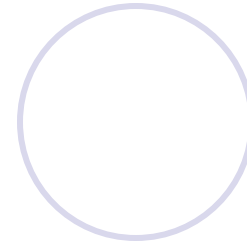

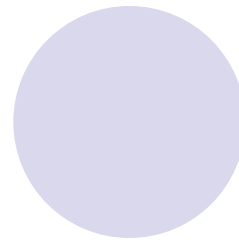

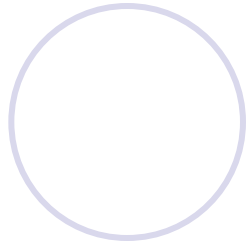

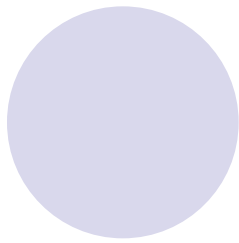

# Example 2

- Barney is considering buying a Samsung 3-D TV for \$1,894. He can amortize his loan over 1 or 2 yrs. He can finance it at 12% or 15% and he can make a 10% or 20% down payment.
- We want to know which combination of amortization period, interest rate, and down payment yields the lowest total payments.

# of yrs	% down	D	P	T at 12%	T at 15%
1	10%				
2	10%				
1	20%				
2	20%				

# of yrs	% down	D	P	T at 12%	T at 15%
1	10%	\$189.40	\$1704.60	\$2006.81	\$2035.65
2	10%	189.40	1704.60	2115.19	2173.00
1	20%	378.80	1515.20	1994.26	2019.91
2	20%	378.80	1515.20	2090.62	2142.01
